COVID-19 Impact and Recovery Report: Germany
Updated: June 3, 2020

This report provides a snapshot of the situation in Germany. It includes the following sections:

1. **COVID-19 Cases and Related Restrictions**: The number and growth rate of cases as of a certain date. Given the fluidity of the situation, these numbers will be out of date very quickly, but the intent is to provide context for analysis, as well as a sense of the scale. It also provides the known travel bans and restrictions in the country.

2. **Estimated Impacts on Travel to Canada**: The effects of COVID-19 on tourism revenue in Canada. This includes estimated spend inside the country, but excludes spending on transportation to get to Canada.

3. **Recovery Signals**: The comprehensive approach to understanding when the market is recovering from a travel perspective based on data and analysis in partnership with Google, Expedia, International Air Transport Association (IATA) and more. Destination Canada uses this information to estimate the stage of recovery of the market.

4. **Methodological Notes**: An explanation of the methodologies in the different sections and relevant sources.

### 1. COVID-19 CASES AND TRAVEL RESTRICTIONS IN GERMANY

As of June 2, 2020 the COVID-19 pandemic is slowing but is still on an **upward** trajectory in Germany in terms of the reported number of confirmed cases and deaths. Current numbers:

- Total Confirmed: 183,897 (+2% compared to previous week)
- Total Deaths: 8,563
- Total Recovered: 166,609

**Confirmed COVID-19 Cases**

[Graph showing confirmed COVID-19 cases in Germany from January to June 2020]

Source: European CDC (as of June 2, 2020)
Effective March 18, 2020, Canada closed its borders to non-Canadian citizens/permanent residents².

As of March 20, 2020, Germany issued a warning against unnecessary tourist travel abroad until at least the end of April 2020. This warning is still in place and will continue to apply until further notice. However, on June 3, 2020, the German government announced that the travel warning for the member states of the European Union, the Schengen-associated states, and the United Kingdom will be lifted as of June 15, 2020³.

German border controls with France, Austria and Switzerland, as well as air border controls with flights from Italy and Spain, will remain in place until June 15, 2020. The end date for border controls with Denmark is still to be determined. There will, however, be some increased flexibility in the practical implementation of the controls. The European Commission has proposed extending their external border restrictions on non-essential travel into the European Union until June 15, 2020 and Germany will comply with that recommendation³⁴.

Domestically, as of March 22, 2020, Germany introduced expanded limitations on social interactions, including limiting group gathering size and only allowing takeaway service for restaurants. These were applied in all German states⁵.

German Chancellor Angela Merkel announced an initial limited lifting of restrictions beginning on April 20, 2020 and a gradual reopening of schools beginning on May 4⁶. As of May 6, 2020, domestic lockdown restrictions have been eased more broadly, including a lifting of all restrictions on shops. However, masks must still be worn and social distancing maintained. Germany’s 16 federal states will take the lead on the timing of reopening, under an agreement with the government. The agreement includes an “emergency brake” to reintroduce restrictions if there is a new surge in infections⁷.

2. ESTIMATED IMPACTS ON TRAVEL TO CANADA

As of May 30, 2020, based on data from payment cards, Statistics Canada, cancellations of previously planned trips, new bookings and forward-looking scheduled air capacity, Destination Canada estimates the economic impact from COVID-19 on Canada to be as outlined below.

Estimated Change in Tourism Export Revenue Compared to 2019 by Quarter ($M)

Source: Destination Canada Estimates (data as of May 30, 2020)

Destination Canada has commissioned Tourism Economics⁸, to develop a series of models to estimate the impact of COVID-19 on the Canadian economy and travel. This analysis considers two scenarios: **Virus Contained Scenario:** (travel is possible in July and August) and **Virus Not Contained Scenario** (no travel in July and August).

Assessing the current trajectory of COVID-19 against these models will allow Destination Canada and its partners to continue to refine the estimated impacts and understand the speed and scale of recovery. The chart below compares the current estimates against these models.
As German travellers generally book their travel to Canada up to four months in advance, we do not currently have enough data to assess the impacts past September 2020.

Destination Canada currently assesses that while the estimated tourism spend in previous months has generally been in line with the Virus Contained scenario, we are on track for June 2020 to fall below the Virus Not Contained scenario.

At this point, the data indicates that July to September may fall somewhere in between the two scenarios. However, Destination Canada assesses that actual July to September travel will continue to fall as airlines have yet to announce cancellation notices for flights departing from July onward. This would likely trigger ticket cancellations or conversions to vouchers for future travel. There have been a negligible number of new bookings since mid-March 2020, given the uncertainties of border restrictions.

### 3. RECOVERY SIGNALS

In response to COVID-19, Destination Canada has established a framework and analytical approach to identify signals from consumer and industry behaviour to understand when, where and at what pace travel and tourism will resume. Destination Canada collaborated with partners in destination marketing, media, technology and travel to identify these indicators and signals. The framework has identified multiple phases of recovery, which aligns with user sentiment and intent to travel. The summary of the methodology and terms can be found in Section 4. Methodological Notes.

The framework below provides analysis on when travellers may considering, planning and reserving travel.

**Destination Canada’s Assessment of the German market:**

<table>

<td>II Domestic</td>
<td></td>
</tr>
<tr>
<td>III Tentative Int’l</td>
<td></td>
</tr>
<tr>
<td>IV Regularized Int’l</td>
<td></td>
</tr>
</tbody>
</table>

**Travel Search Index**

**Accommodation Searches on OTA**

After declining from the end of February until reaching a plateau in the week ending March 22, YOY domestic accommodation searches have been trending up since early May, in line with the gradual easing of restrictions. Destination Canada assesses that Germans have started to resume their search for domestic accommodation.

**Rate of Hotel Booking**

While YOY domestic accommodation bookings were on the decline since mid-February 2020 and plateaued since the week ending March 22, 2020, they have been trending upward since early May 2020, in line with the gradual easing of restrictions. DC assesses that this may be an early sign that Germans may be starting to resume booking domestic accommodations.

**Rate of Air Travel**

Not applicable at this stage.

**New COVID Cases**

The number of weekly new cases in Germany has been declining for several weeks, having reached a potential peak in the week ending April 5, 2020. However, there were still 3,201 new cases in the week ending May 31, 2020.

**Dining Search Index**

After declining from mid-February until reaching a plateau at the end of March, YOY domestic dining searches have been trending up since early May, in line with the gradual easing of restrictions. Destination Canada assesses that Germans have started to resume their search for domestic dining.

**Activities Search Index**

YOY domestic destination activities searches have been trending up since the end of April 2020, in line with the gradual easing of restrictions. Destination Canada assesses that Germans have started to resume their search for domestic destination activities.

**Legend:**

- Current phase
- Not there yet
- Signal not applicable

**Future Planned Travel**

The chart below provides an assessment of when travellers are booking travel to Canada. This assessment is based on changes to net planned travel (new bookings, less cancellations) from the country to Canada, compared to past travel behaviour.

- A ‘declining’ signal indicates that the year-over-year net planned travel is falling week over week and is likely not a period currently being considered for travel.
- A ‘plateau’ signal indicates no change week over week.
- An ‘increasing’ signal indicates there is an increase in year-over-year net planned booking, week over week and that this time period is being considered for travel to Canada.
- A ‘not enough data’ signal indicates that travellers do not normally book that far in advance so we cannot assess the signal at this time.

**Planned Travel for Germany to Canada compared to 2019, as of May 30, 2020**

**Legend:**

- Declining
- Increasing
- Plateau
- Not enough data
I. COVID-19 Cases: The intention for this section is to provide context on impact and recovery analysis by providing a snapshot in time of the state of the pandemic and government restrictions. For the most current information on COVID-19 in that country, readers are encouraged to seek information from official government sources.

II. Estimated Impacts: The estimates are based on data from spending on credit and debit cards in Canada for January, February and March, normalized against Statistics Canada data. For April onwards, forward-looking air booking and cancellation data for return tickets from IATA accredited travel agencies is used. Destination Canada estimates that these IATA bookings account for 34% of the air travel market from Germany to Canada in 2019. Also used in the analysis is the forward-looking scheduled air capacity. These impacts are based on modelled estimates from 2018 spending data, adjusted for travel growth, and using payment card data from 2019 and 2020 wherever possible. The analysis should be taken as indicative only.

Based on in-market intelligence, we know that travel agents and operators have prioritized repatriation of clients in areas with outright travel bans (e.g. Middle East, India, Peru) and are not processing cancellations normally. Different airlines also use various systems to re-book travel, some of which are incenting late rebooking (i.e. closer to the original date of travel). As such, the forward booking data may over-represent the amount of travel that will happen and should be taken as an upper bound.

III. Recovery Signals: The Recovery Measures are listed in their order of importance in understanding travel behaviour, with the primary measures in black and supporting measures in dark gray. A brief description of each measure is provided below.

Destination Canada has developed a framework to understand the phases of recovery of the travel market. These phases are:

I. **COVID-19 Response**: Governments are responding with measures such as shelter–in-place orders and mandatory quarantines. Movement is restricted and travel is either not possible, desirable or encouraged.

II. **Domestic Travel**: Travel by multiple means (air, car, trains, etc.) within the country, across provincial/territorial/state boundaries.

III. **Tentative International Travel**: Some international travel, likely only required travel such as family-related or urgent business. There may be some leisure travel as some less risk-averse travellers seek to capitalize on reduced prices or increases availability. Airlines may not have restored international routes beyond major hubs.

IV. **Regularized International Travel**: Regular international travel. Some business meetings and events are re-introduced and attended, leisure travel is closer to pre-COVID-19 levels.

A filled-in dot in the Assessment Summary table signifies that Destination Canada assesses we are in that phase of travel. An empty dot means we have not yet reached that indicator and the crossed off box would signify that the measure does not apply for that phase of recovery. Some measures are currently being developed and will be updated as progress is made.

**Description of the Measures**

- **Travel Intent Search Index**: Google search engine queries for travel-related keywords in 2020 compared to 2019 searches, broken down by week (i.e. week of April 19, 2020 vs week of April 19th, 2019). Available for each market's domestic, international and Canada-specific travel search terms.

- **Rate of Accommodation Searches**: Weekly searches in 2020 for accommodation on a major online travel agency (OTA) against a rate of 2019 weekly searches, broken down by week. Available for each market's domestic, international and Canada-specific accommodation searches. This is provided as a rate rather than a volume of searches.

- **Rate of Accommodation Bookings**: Accommodation bookings in 2020 on a major OTA against a rate of 2019 bookings, broken down by week. Available for each market’s domestic, international and Canada accommodation bookings. This is provided as a rate rather than a volume of bookings.

- **Rate of Air Travel**: The volume of forward-looking 2020 air bookings by month to Canada versus 2019 air bookings, broken down by week. By comparing against the 2019 average of when travel was booked for and when it was booked, this establishes the amount of impact against each month of travel. When appropriate, this assessment is supplemented by analysis of the forward-looking planned air seat capacity within a country and to other countries.
• **Weekly New COVID-19 Confirmed Cases**: The weekly total of new confirmed COVID-19 cases, as provided by the European Centre for Disease Prevention and Control. Number of cases in the market and within Canada will likely be a determining factor for both governments allowing phased return of travel, as well as consumer confidence in traveling to a market.

• **Dining, Attractions & Events Search Index**: Google searches for dining, attraction and event-related keywords in 2020 compared to 2019 searches, broken down by week. Available for each market's domestic, international and Canada-specific dining, attraction, and event-related search terms. This is provided as an index rather than a volume of searches.
